Subject Name: Web Programming

Subject Code: 22CS450

Reg No: 2403917710422119

EXERCISE-2:

CREATE A WEB PAGE TO HANDLE EVENTS AND OBJECTS USING JAVA SCRIPT (HTML,CSS,JS,ADVANCED JS)

AIM:

To design and develop a professional Admin Login webpage using HTML, CSS, and JavaScript that demonstrates the use of events and objects in JavaScript.

PROCEDURE:

1. Create the basic structure of the webpage using HTML.
2. Design the login form with input fields for Email and Password.
3. Add a “Remember Me” checkbox and Reset Password option.
4. Style the webpage using CSS with a professional dark blue and grey theme.
5. Implement JavaScript for form validation.
6. Create a JavaScript class (AdminUser) to handle login validation using object-oriented programming.
7. Use JavaScript events such as:
    a. submit event for login form
    b. click event for reset password
    c. focus and blur events for input fields
    d. mouseover event for button effects
8. Use setTimeout() to display messages and simulate login delay.
9. Use localStorage to store user session when “Remember Me” is selected.

10. Test the webpage to ensure proper login validation and event handling.

SOURCE CODE:

HTML AND JS:

```
<!DOCTYPE html>
<html>
<head>
   <title>Advanced Admin Login | InternTrack</title>
   <link rel="stylesheet" href="style.css">
</head>
<body>

<div class="login-container">

   <h1>Admin Login</h1>
   <p class="subtitle">Advanced JS - Events C Objects Demo</p>

   <form id="loginForm">

        <div class="form-group">
          <label>Email</label>
                <input type="email" id="email" placeholder="admin@interntrack.com">
       </div>

      <div class="form-group">
         <label>Password</label>
         <input type="password" id="password" placeholder="••••••••">
      </div>

      <div class="options">
         <label class="remember">
```

```
            <input type="checkbox" id="remember">
            <span>Remember Me</span>
        </label>

        <a href="#" id="resetPassword">Reset Password</a>
    </div>

    <p id="message" class="message"></p>

    <button type="submit">Login</button>

  </form>
</div>

<script>

/* ============================
  OBJECT USING CLASS (ADVANCED JS)
============================ */

class AdminUser { constructor(email,
  password) {
    this.email = email;
    this.password = password;
  }

  validate() {
    return (
        this.email === "admin@interntrack.com" CC this.password
        === "admin123"
    );
  }
```

```
    saveSession() { localStorage.setItem("adminEmail",
        this.email);
    }
}

/* ============================
   SELECT ELEMENTS
============================ */

const form = document.getElementById("loginForm"); const

```

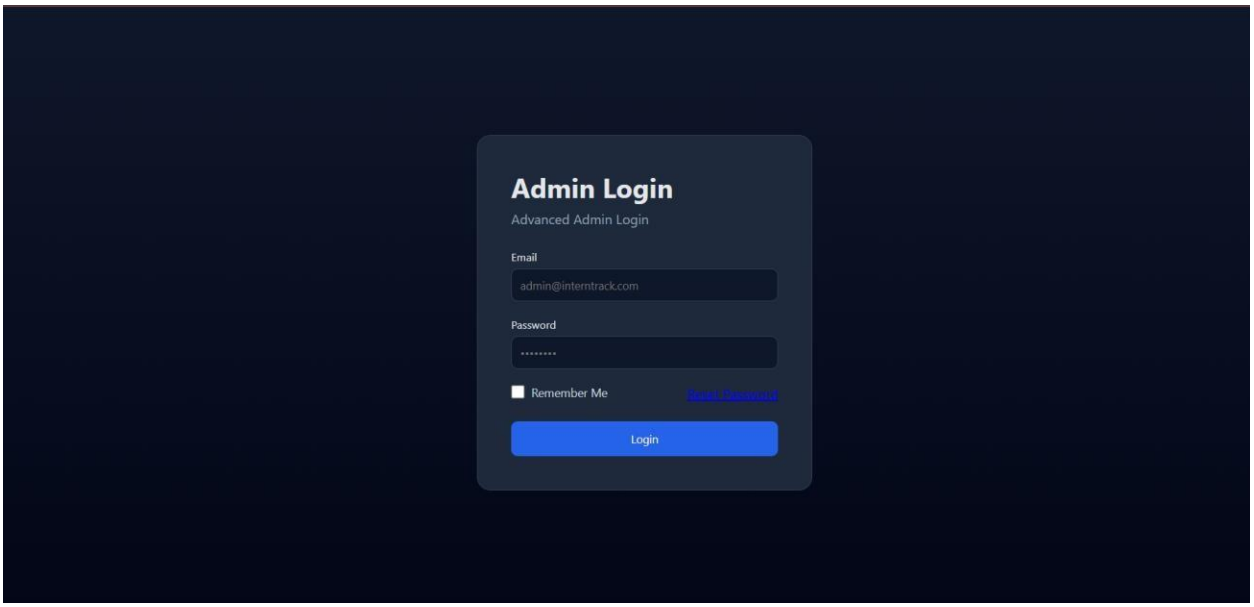
OUTPUT:



RESULT:

The Admin Login webpage was successfully created using HTML, CSS, and JavaScript.
The webpage handles user interactions through various JavaScript events and uses objects (class and methods) for login validation. The login system works correctly with proper input validation, reset password functionality, and session storage.
